

PREPARING STUDENTS FOR GLOBAL CONTEXT OF EDUCATION AND EMPLOYMENT

INTRODUCTION

The purpose of the present project will be to explore the factors responsible for the lack of equity regarding the quality of education for students in India. According to Bangay and Latham (2013), quality education was the major concern which was responsible for the migration of students from public schools to the private schools.

PROBLEM

The Indian public school system failed to provide essential skills to students which ultimately affected the scholastic results of students (Goyal & Pandey, 2009). Hence, privately educated students are far more prepared for global context of employment and advanced education, than for students in public schools.

METHOD

Social networking sites were an effective tool for the educational purpose. The impact of social media was emerging among the students depending upon the context of educational material provided by sites (Tess, 2013). A Facebook page will be created to prepare the students to meet the global needs of education.
